

### **Guidance in urban and technical issues Techno-economic and legal advice**

Many times in order to solve a problem it is not necessary to use an expert. An advice or an explanation can prove to be enough for someone interested in order to manage the solution on his/her own.

Our office offers explanation and advice on urban issues (e.g. place of real estate, building regulations, buildable lands, possibility and methods of distributions, etc.) on technical issues (e.g. in additional areas of the buildings, construction materials, fencing, landscape design, etc.), on techno-economic issues (e.g. oral estimates, cost estimates, cost- profit relations, etc.) and on legal issues (contract interpretation, contract corrections, division of land etc.).

We can discuss with you on our website, but you can also pay us a visit in our office.
